

# CBS H-Tech™ Conveyor Belt Cleaners

CBS H-Tech™ Conveyor Belt Cleaners efficiently remove as much as possible of any carry back material remaining on the conveyor belt after load discharge and place it back into the product flow.

## What they do:

- Prevent the accumulation of material on conveyor belt rollers and structures
- Stop the overburdening of secondary conveyor belt cleaners
- CBS H-Tech™ Conveyor Belt Cleaners have the added benefit of helping to ensure a clean and safe working environment

## How they can be used:

- CBS H-Tech™ Conveyor Belt Cleaners can be used both individually or in conjunction with CBS secondary cleaners as part of a full cleaning system
- CBS H-Tech™ Conveyor Belt Cleaners are designed for use on both single directional and bi-directional conveyor belts
- CBS H-Tech™ Conveyor Belt Cleaners work excellently when installed at both head and tail pulleys on reversing conveyor belts
- Where a conveyor belt is mechanically fastened, worn or damaged, it is recommended that **CBS H-Tech™ Polyurethane Conveyor Belt Cleaners** are used

## Why they're superior:

- CBS H-Tech™ Conveyor Belt Cleaners remove up to 80% of carry back material left on the conveyor belt after discharge
- The durable stainless steel construction of CBS H-Tech™ Conveyor Belt Cleaners ensures that they can provide high level cleaning over longer periods, resulting in reduced maintenance costs and less need for replacement
- CBS H-Tech™ Conveyor Belt Cleaners are more sturdy than their competitors due to the incorporation of thicker tip mount support – this prevents the cleaner tips from bending and damaging the conveyor, as well as reduces the risk of the cleaner arm bending in harsh conditions
- Our incorporation of easy-start replaceable studs means that maintenance doesn't require removal of the whole arm – only the stud itself
- CBS H-Tech™ Conveyor Belt Cleaners have been designed with larger slots for increased adjustability
- CBS H-Tech™ Conveyor Belt Cleaner tips are made from high-grade impact-resistant tungsten carbide to ensure that service life is maximised
- CBS H-Tech™ Conveyor Belt Cleaner arms are available in five different sizes: SS, S, M, L and LL
- Complete Belting Solutions Pty Ltd is 100% Australian owned and operated
